CONTRIBUTION JOURNAL

1. JENNIFER R.

As contribution for this lab is first having everything prepared in GitHub, with all the files necessary that's needed to complete the lab and help organize the group with everything. Group members then all did the lab independently so that we could come together and express our thoughts and ideas together to come with a conclusion. Also made sure everyone stays on track and we collaborated to make sure everyone understood of everything that is happening with so far what we learned.

2. MARCUS W.

I tested the code and answered questions to make sure everything ran well.

I reviewed the submitted documents and contributed to reflection journal/questions.

I also helped to verify everything was ready to turn in and there were no more final contributions.

3. SAFA B.

I run the Python code to confirm that it worked correctly. I also reviewed the outputs and visualizations and compared the completed notebook with the assignment instructions.

Also, I helped verify that the experiments, knowledge check answers, and required files were completed and ready for submission.

4. MARTIN H.

For this group lab, I worked on the Module 04 EDA notebook. I ran the provided Python code and checked the outputs and graphs.

I also worked on the two experiments in Part 4. I created a graph for survival by port of embarkation and a boxplot for fare compared with survival. I answered the three Knowledge Check questions and reviewed the notebook to make sure the required sections were completed. I worked with my group and helped make sure the lab was ready to submit. I also checked that the code ran correctly and that the graphs were showing.
